HGET

Syntax

```
HGET key field
```

Available since: 2.0.0
Time complexity: O(1)
ACL categories: @read, @hash, @fast

Returns the value associated with `field` in the hash stored at `key`.

Examples

```
● ▲ ★

redis> HSET myhash field1 "foo"
(integer) 1
redis> HGET myhash field1
"foo"
redis> HGET myhash field2
(nil)
redis>
```
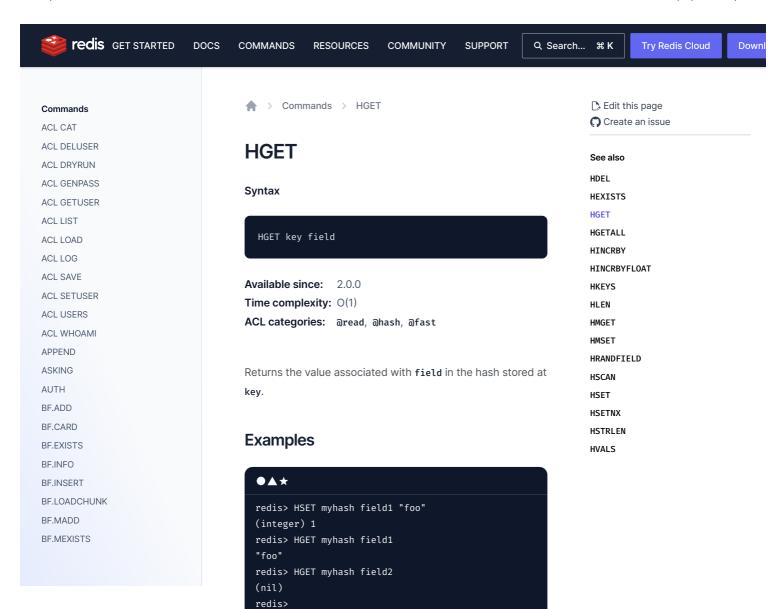

RESP2 Reply

One of the following:

- Bulk string reply: The value associated with the field.

- Nil reply: If the field is not present in the hash or key does not exist.

RESP3 Reply

One of the following:

- Bulk string reply: The value associated with the field.

- Null reply: If the field is not present in the hash or key does not exist.
